Template Instructions

- Place your data in `data.csv`. This might be exported from a spreadsheet program. The first line should contain the field headers – avoid space characters.
- Load the data file with `\DTLloaddb{data}{data.csv}`.
Use `\DTLloadrawdb{data}{data.csv}` if you expect it to contain special characters like \$, &.
- Design your card/document. Use the mapped commands to insert fields.

```
\DTLforeach{data}{% for each row of data:
  \Name=Name, % Map each column header to a command
  \Email=Email, ...}{
  % Use these mapped commands to insert field values, e.g.
  Delegate name: \Name <\Email>
}
```
